

# Temperature Controlled Packaging Systems

## Sepio®

Pre-qualified for 2°C - 8°C and 15°C - 25°C using the same brick cassettes • Multiple payload sizes • Cost-effective solutions • Water-based refrigerant cassettes • Seasonal pack-outs • Global availability

## Fortis®

Tested to ISTA 7D Profiles • 2°C - 8°C Universal Solution: 48 and 72 hour • 15°C - 25°C Solution: 48, 72, 96 hour • Frozen Shipper for 48+ hours • Advanced Phase Change Material • Priced For Single Use - Robust Enough for Multiple Shipments

## Răcire®

72 - 96 hour Universal 2°C - 8°C Solutions • 48 - 72 hour Universal 15°C - 25°C Solutions • Cost effective water based refrigerant • No Post Conditioning • Same refrigerant bottles leveraged for entire Racire family • Inner cooler can be packed in refrigerator without risk to product

## Imperium®

- Performs to ISTA 7D Standard
- 1 Shared Platform – 24 Configurations
- Variable Temperature System
- Patent Pending Technology

## Volo®

Pre-qualified for 2°C - 8°C and 15°C - 25°C shipments • Universal pack-out • Seasonal pack-outs for extended durations under 2°C - 8°C • Multiple payload sizes • Neopor® insulation and water based brick cassettes • Global availability

## Fortis® Elite

2°C - 8°C and 15°C - 25°C Solutions • Frozen Shipper for 96+ Hours • Tested to ISTA 7D Profiles • 120+ hour Shipping Solutions • Unique VIP Insulation with PUR Shell • Unmatched Performance and Product Protection • Robust Enough for Multiple Uses • Advanced Phase Change Material

## Răcire® Elite

Validated to ISTA 7D • 48 - 72 hour Universal 2°C - 8°C Solution • 48 hour Universal 15°C - 25°C Solution • Water/ PCM Convection Based Design • Same refrigerant bottles leveraged for entire Racire family • Inner cooler can be packed in refrigerator without risk to product

## Phase Change

Phase Change Materials provide a perfect thermal barrier/insulation between your payload and external temperature fluctuations frequently seen during transport.
